IC_TERMINAL

The institutional research layer, made possible by *agentic AI.*

34 SPECIALISED AGENTS • 4 MULTI-AGENT FRAMEWORKS • ONE RESEARCH ARCHITECTURE

The most important diligence questions often arrive too late.

Venture teams make high-stakes decisions from scattered material: decks, founder claims, websites, market noise, partial metrics, and internal notes.

The problem is not lack of information.

The problem is knowing which claims to test, which assumptions carry the case, and which unanswered questions could change the decision.

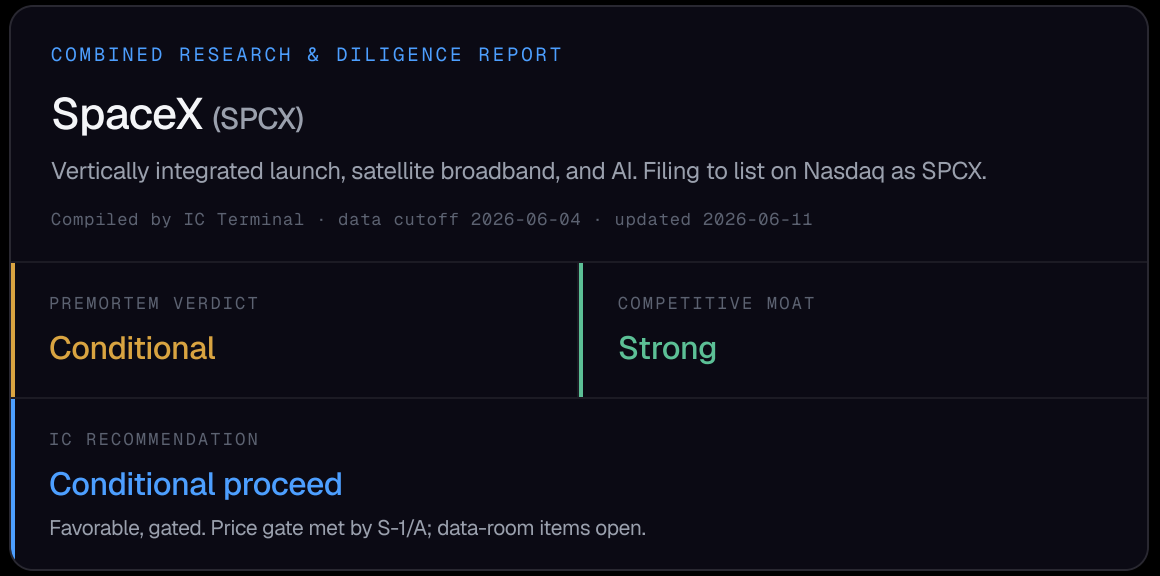

A PM orchestrator runs specialist agents across phases, with quality gates between each.

RESEARCH FRAMEWORK · EXAMPLE PHASE RUN

- Each framework (diligence, research, tech audit) runs its own phases through the same orchestrator and quality gates.
- Every claim is typed, conviction-scored, and source-chained.
- A human-in-the-loop checkpoint sits after Phase 1, before the deep work commits.
- A “delta since last sweep” re-run posture accumulates a longitudinal evidence history per company.

Every claim is chained to a source you can open in one click.

A real SpaceX S-1 report. Three findings it surfaced, each chained to the filing:

✓ Falcon 9 cut launch cost about **85%** below the ~$18,500/kg historical average.

≠ The self-funding story does not hold: about **79%** of FY2025 Space-plus-AI burn was externally financed.

? The S-1 discloses no churn, retention, or top-customer concentration data.

Sanitized and public at ic-terminal.com, so the depth is checkable before any meeting. Not investment advice.

One engine, three institutional frameworks.

Submit a target: a company, a URL, a filing, or a codebase. IC Terminal runs the framework the decision needs and returns a sourced, conviction-scored deliverable, never a summary.

Diligence

DEAL & COMPANY DILIGENCE

An IC memo with a bear, base, and bull verdict, built from a financial, competitive-moat, and technical read.

INVESTMENT DECISIONS · COMPANY AUDITS

Research

MARKET & PRODUCT RESEARCH

A long-form report: competitor teardowns, technical architecture, and economic and game-theory analysis.

VALIDATE AN IDEA BEFORE YOU COMMIT

Tech Audit

CODEBASE & ARCHITECTURE AUDIT

Developer and CTO reports: severity-ranked gaps, risks, and key-person exposure.

AUDIT A REPO · ARCHITECTURE · KEY-PERSON RISK

Whatever the target, the depth and the evidence trail stay the same.

Point it at your next deal, idea, company, or codebase, and get an audit-grade verdict back with every claim traceable.
